

AXEGAZ T&T delivers an LNG satellite keys in hand for Engie

December 2023 - AXEGAZ T&T has just commissioned a LNG satellite for the company Engie, thereby confirming its commitment to providing the highest level of performance for our clients.

The LNG satellite implemented by AXEGAZ T&T is designed to supply gas to the new strategic site's gas boiler. It is fully automated and remotely accessible through electronic equipment. The satellite employs state-of-the-art technology to safely distribute natural gas. AXEGAZ T&T's patented technologies feature optimal functionalities such as continuous operation, exhaust gas management, and compliance with zero-emission requirements.

Today, some industrial sites use liquefied natural gas (LNG), a cleaner alternative to petroleum-based fuels (LPG, diesel, etc.). Furthermore, LNG allows for further steps towards sustainability, as it can be substituted, without modifications to installations and in any desired proportion, with bio-LNG, whose CO2 footprint is almost negligible. We have extensive experience with bio-LNG, having made our first delivery in 2014.

Engie's recognition of AXEGAZ T&T for this significant project underscores our proven ability in managing sensitive projects, always adhering to the most stringent deadlines. This success strengthens our position as a reliable partner in ensuring the security of essential energy infrastructure.

We invite you to contact us to discuss how AXEGAZ T&T can meet your specific energy needs and contribute to the safety of your installations, as well as reduce your CO2 emissions.
