

AXEGAZ to open its Fifth LNG station in Le Havre

June 28th 2018 - Axégaz has signed a long term land lease agreement **with Le Havre Main Port Authority** to build one of the LNG refueling stations in the context of its European network (project “LNG Motion”, co-sponsored by the European agency INEA).

The LNG refueling station, to be built **at the heart of Le Havre harbour** (one of the busiest maritime transport hub in the North of France) in order to refuel efficiently the fleets of heavy goods vehicles working in and out of the harbor, will open for business by the end of 2018.

The LNG refueling station at Le Havre will be the **fifth station** opened by Axégaz in France, after those in LILLE, PARIS et NANCY (already operational at this date) and that in DIJON (scheduled to open in the summer 2018).
