

AXEGAZ T&T receives ISCC certification for its bio-LNG offering

Aug 26th 2022 – AXEGAZ T&T has just obtained ISCC-EU certification underpinning its determination to offer bio-LNG (liquified biomethane) with the strongest possible guarantees for the customers.

We have been pioneers in the field of bio-LNG offering such renewable and sustainable fuel for the first time in 2014. Biomethane, including its liquid form, Bio-LNG, is a renewable, clean alternative fuel, ideal to reach net zero in the heavy-duty transport, whose cost is largely insulated from world geopolitical instabilities, as its produced across many EU countries.

We have a range of bio-LNG and biomethane offerings to satisfy the diverse requirements of our customers; and we are now adding **ISCC certified bio-LNG** to it.

The ISCC (International Sustainability and Carbon Certification <https://www.iscc-system.org/>) is a globally applicable sustainability certification system and covers all sustainable feedstocks, including agricultural and forestry biomass, circular and bio-based materials and renewables. It is one of the few certifications system that have so far been formally recognised by the European Commission as adequate for operator to prove their compliance with Sustainability criteria as defined in RED II, and has become a de facto reference in the field of bio-fuels certification.

Customers can use AXEGAZ T&T's ISCC certified bio-LNG for the most stringent requirements, for instance to obtain very valuable biofuel incorporation quota certificates in many countries: UK, Germany, Netherlands, Italy, etc.
